

## VOICE INTELLIGENCE FOR FRONTLINE OPERATIONS

# The radios you already use. The systems you already rely on. Now connected.

Memo connects frontline radio communication to the software an organization already uses. An on-site voice-intelligence layer, Memo turns authorized radio conversations into structured information that teams can access, share, and act on.

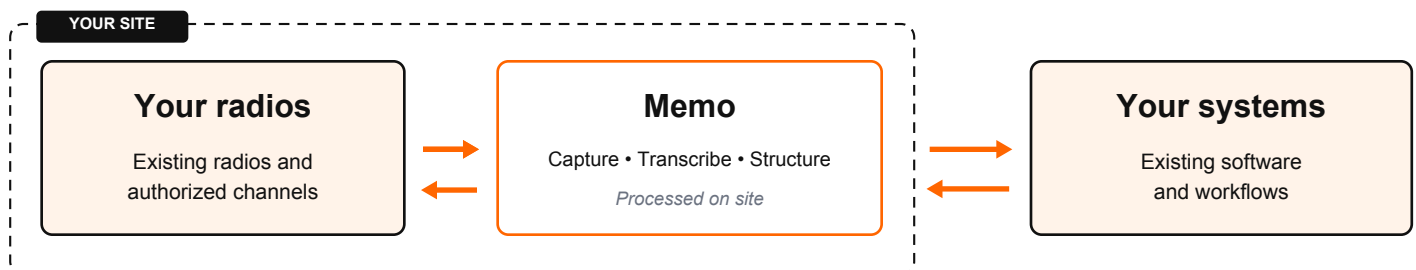

Workers keep their existing radios and familiar ways of communicating. Organizations gain a clearer view of what is happening across their operations.

## CONNECTING SPOKEN WORK TO DIGITAL SYSTEMS

Frontline teams coordinate through conversation. Much of that context never reaches the systems used to manage the business.

Memo helps close that gap, making radio communication a usable source of operational information and a foundation for connecting people, knowledge, and workflows.

## HOW MEMO WORKS

| Listen                                                                                                                   | Understand                                                                                                                     | Act                                                                                                                                                  |
|--------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------|
| An on-site device listens to selected, authorized radio channels using the organization's existing radio infrastructure. | Memo processes radio traffic locally, turning speech into searchable information and identifying relevant operational context. | Structured information can flow into existing software through configured integrations, with permissions and routing controlled by the organization. |

## BUILT AROUND YOUR OPERATIONS

- Existing radios and familiar communication habits.
- On-site processing, with raw audio kept local.
- Organization-controlled access, retention, and data sharing.

## Explore the fit

We're exploring partnerships that bring voice intelligence to frontline operations. Let's discuss where Memo could complement your technology, services, or customer relationships.
